Smart Classroom Engagement Detection System

An AI-powered monitoring and intervention system that detects disengagement in real-time and empowers instructors to adapt teaching strategies instantly.

Made with GAMMA

Real-Time Detection & Intervention

Continuous Monitoring

Multi-sensor data streams analyze facial expressions, posture, and audio patterns across all students simultaneously.

Drop Detection

Automatically flags confusion waves, attention drops, and fatigue patterns for immediate teacher response.

Smart Suggestions

Recommend evidence-based interventions: re-explain with examples, conduct polls, adjust pacing, or energize the class.

Made with GAMMA

System Architecture Overview

Input Layer

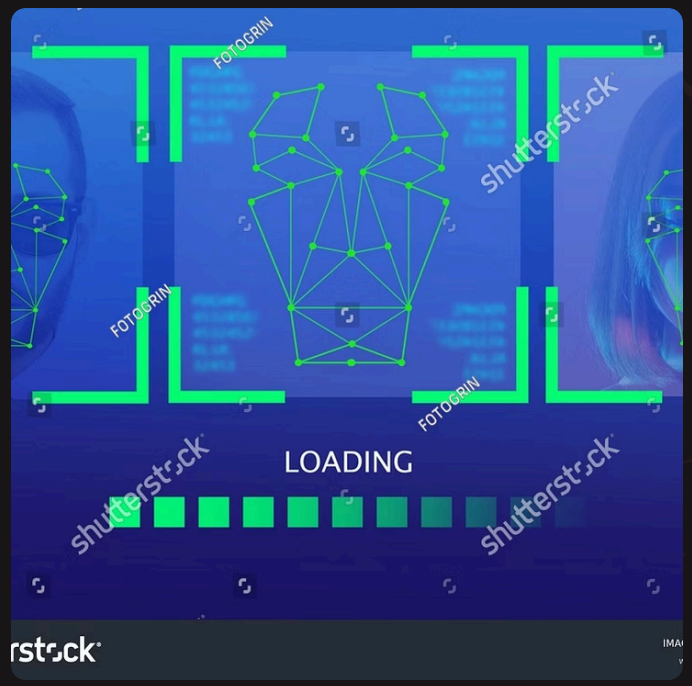
- Overhead camera(s) for face and pose detection
- Ambient microphone for silence detection
- Real-time student tracking

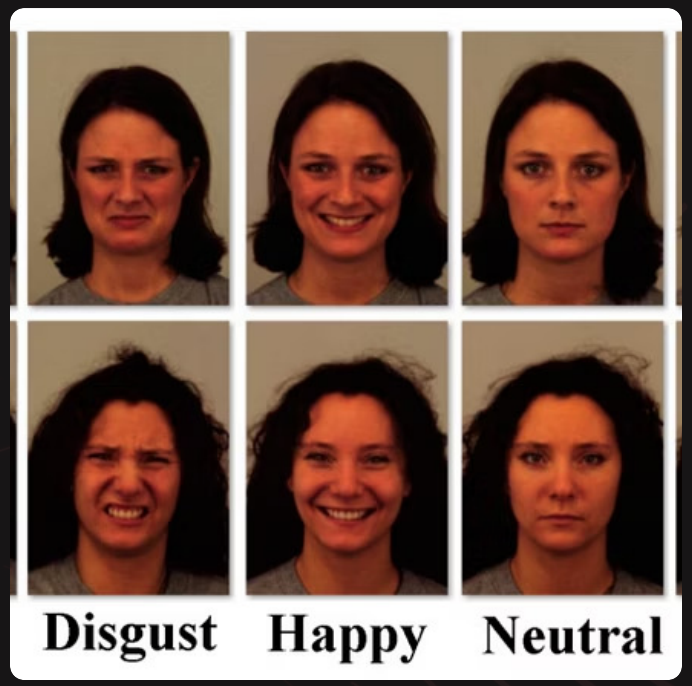
Processing Layer

- Multimodal fusion engine
- Per-student engagement scoring
- Classroom heatmap generation

Made with GAMMA

Facial Engagement Analysis





Feature Extraction

Emotion recognition, eye gaze direction, blink rate, head tilt, and yawning detection.

Emotion Classification

Distinguishes happy, neutral, confused, and bored states using CNN-based FER models.

Attention Metrics

Tracks where students look to gauge focus and identify distraction patterns.

Scoring Formula: $F_i = w_1(\text{attention}) + w_2(\text{positive affect}) - w_3(\text{confusion}) - w_4(\text{fatigue})$

Made with GAMMA

Posture Monitoring with Pose Estimation

Upright & Forward Lean

High engagement indicator

Slouching Position

Decreased interest detection

Head Down on Desk

Complete disengagement warning

Frequent Shifting

Restlessness and distraction

Each posture receives a normalized score contributing to overall engagement calculation.

Made with GAMMA

Audio Silence & Participation Detection

How It Works

Tracks question timestamps, response latency, participant count, and silence duration using WebRTC voice activity detection (VAD).

Question Asked

System logs timestamp

Response Latency

Waits for first response

Engagement Flag

Triggers if >5 seconds

Participation Index: $A = \frac{\text{Active Students}}{\text{Total Students}}$

Made with GAMMA

Multimodal Fusion Engine

Combined Engagement Score

Weights multiple data sources to generate accurate per-student and classroom-level engagement metrics:

$$E_i = \alpha F_i + \beta P_i + \gamma A_i$$

Where E_i represents student i's engagement level, combining facial analysis (F_i), posture scores (P_i), and audio participation (A_i).

10s

Sliding Window

Continuous updates

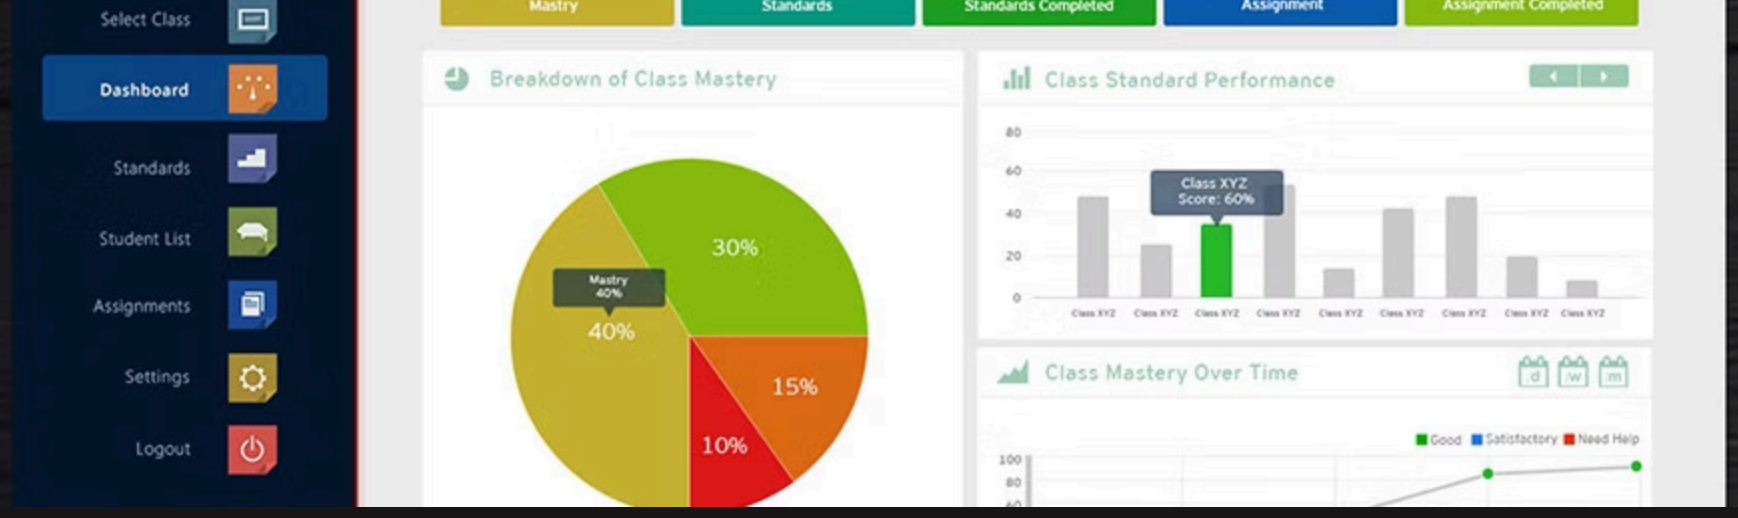
40%

Threshold

Drop detection

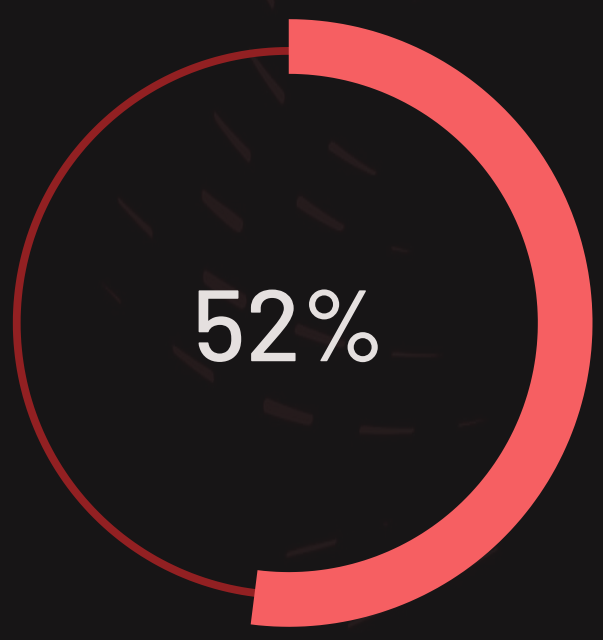
Classroom Average: $E_{class} = \frac{1}{N}\sum_{i=1}^{N} E_i$ plus confusion rate, disengagement percentage, and gaze tracking.

Made with GAMMA



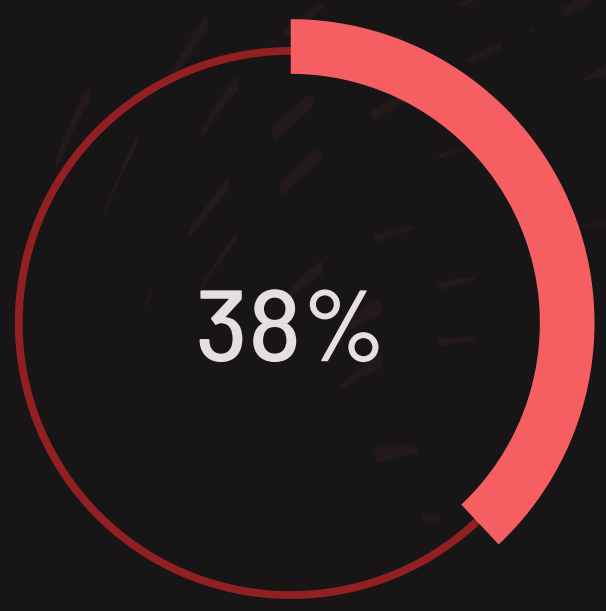
Teacher Dashboard Interface

Live Engagement Overview



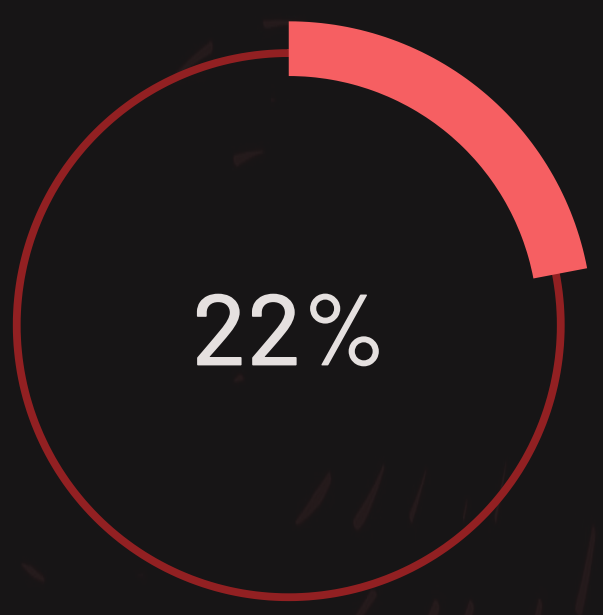
Overall Engagement

Warning status



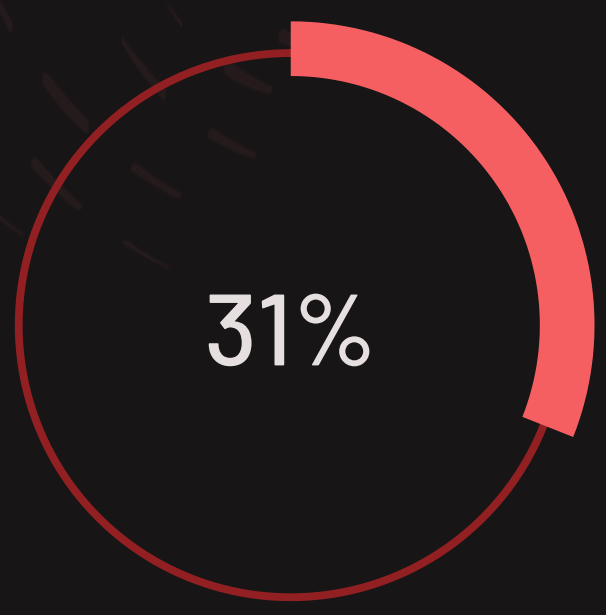
Confused Students

Need explanation



Looking Away

Attention drift



Slouching

Low motivation

⚡ Alert: Engagement Drop Detected

System suggests: "Pause and re-explain with visual example."

Made with GAMMA

Smart Intervention Engine

High Confusion Cluster

Re-explain concept with worked numerical example

Silence After Question

Rephrase or provide hint to stimulate responses

Widespread Slouching

Quick energizer activity or change of pace

Fatigue Signals

2-minute stretch break to refresh students

Low Participation

Ask directed questions to specific students

Advanced: Detect regional patterns (back-row disengaged, left-side confused) using classroom heatmap for targeted interventions.

Made with GAMMA

Technical Stack & Implementation

Core Components

Face Detection
MediaPipe or MTCNN

Emotion Model
CNN (FER-based)

Pose Estimation
MediaPipe Pose

Audio Analysis
WebRTC VAD

Backend API
FastAPI framework

Real-Time Stream
WebSocket protocol

Ethics & Privacy

- Student consent required before deployment
- No long-term video storage – only engagement scores saved
- Privacy masking options available
- No impact on individual grading decisions

Evaluation Metrics

- Engagement classification accuracy
- Precision in low-engagement detection
- Real-time response latency
- Intervention effectiveness rate

Future Extensions

- Reinforcement learning for adaptive teaching
- Personalized student baseline modeling
- LMS integration (Moodle/Google Classroom)
- Attention forecasting with trajectory analysis
